More than 20 Years of Educational Experience

The creators of DriverEdToGo have been involved in education for more than 20 years. In 1999, we founded CyberActive Incorporated in California. We revolutionized the driver education industry when we introduced California to DriverEdToGo, our award-winning online driver education course. We were one of the first online driver education companies in the industry and one of the first to study the effectiveness of online driver education. We have written extensively on the subject and have helped various government agencies formulate rules to adopt online driver education in their states. Today, our driver education courses are approved in numerous states across the country, including California, where we are licensed as Department of Motor Vehicles (DMV) school number E4472.

The DriverEdToGo Philosophy

We are the largest provider of online driver education for teenagers in the United States. Our DriverEdToGo courses are successful because we know how to create engaging content. Our courses give students the flexibility to determine when and how they learn.

Our instructional methodology is rooted in one simple philosophy: Students must be engaged to learn.

Because budgetary constraints have forced many schools to cut their driver education programs, teenagers have had to look elsewhere to fulfill this requirement. Our program allows schools to offer driver education at a low cost while maintaining a high-quality program.

How DriverEdToGo Can Help Your School

The DriverEdToGo online driver education course satisfies the California Department of Motor Vehicles' 30-hour driver education classroom requirement, giving both students and teachers the freedom to decide when, where, and how the course can be completed. The DriverEdToGo course will exceed your expectations in terms of the benefits it offers your school. It is the perfect option for a school that wishes to implement a driver education curriculum but is concerned about budget constraints.

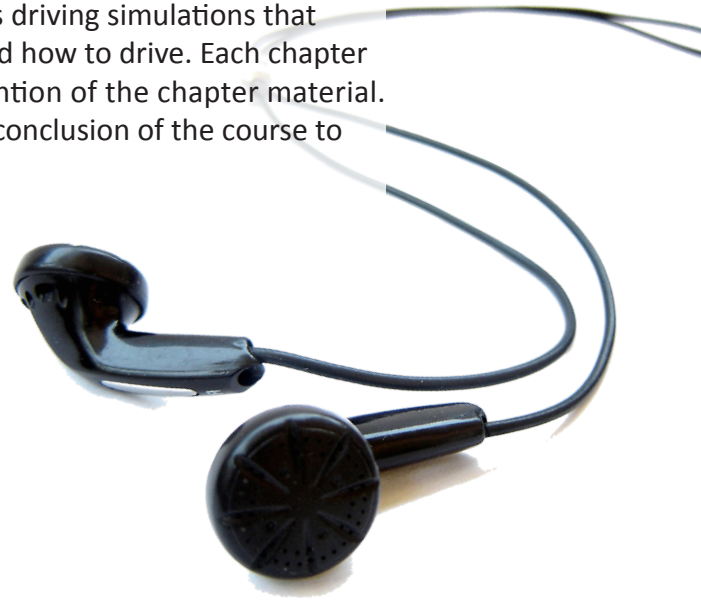

How the DriverEdToGo Course Works

The DriverEdToGo course consists of 16 chapters. Each chapter contains educational content, interactive exercises, streaming video, and various driving simulations that work together to teach teens both the rules of the road and how to drive. Each chapter contains a quiz that tests student understanding and retention of the chapter material. A comprehensive final examination is administered at the conclusion of the course to assess student understanding of all course material.

Read-Along Feature

DriverEdToGo contains a read-along feature that allows students to listen to the course text read aloud as they follow along. The read-along feature qualifies as an Americans with Disabilities Act (ADA) compliant resource, as it aids students who may have a visual impairment or a learning disability.

Interactive Drills and Games

DriverEdToGo has a variety of interactive drills and video games designed to reinforce key course material. These helpful learning tools were created by driving-safety professionals and e-learning experts with extensive experience in educational game creation.

Above is a screenshot of "The Sign Game," which asks students to correctly match a series of road signs with the appropriate definition.

Pictured above is another popular game called "So You Think You Can Drive," which puts students behind the wheel of a virtual car with a driving instructor. Students must pass a series of driving tasks, which become more difficult with each level of play.

PrepWizard™

Our proprietary PrepWizard software prepares students to pass the DMV written exam on their first attempt. This revolutionary testing software contains hundreds of authentic DMV questions displayed in four modes: Assessment Mode™, Specialized Mode™, Intense Mode™, and Exam Mode™. In Assessment Mode, the student takes a practice exam and receives a detailed diagnostic score report that pinpoints strengths and weaknesses. PrepWizard then adapts its questions to focus on identified areas of weakness to fully prepare students for the actual DMV exam.

ASSESSMENT MODE

This is the first step in your exam preparation. Once you have completed an entire set of questions you will get a detailed diagnostic score report that lists your strengths and weaknesses.

SPECIALIZED MODE

This section is one of your greatest tools. Here, Prep Wizard™ will strengthen your overall performance on exams by giving you short quizzes in your areas of weakness.

INTENSE MODE

This section prepares you to take a full-length exam. Here you will take a full-length exam while we keep track of your time. If you miss too many questions or if your time exceeds the allotted time, you will keep taking the exam in Intense Mode until you improve your accuracy and speed.

EXAM MODE

You are ready to take the exam under simulated exam conditions. You will have three hours and fifteen minutes to answer 150 questions of each exam. We recommend that you take as many exams as necessary in Exam Mode until you consistently score 80% or higher on these practice exams.

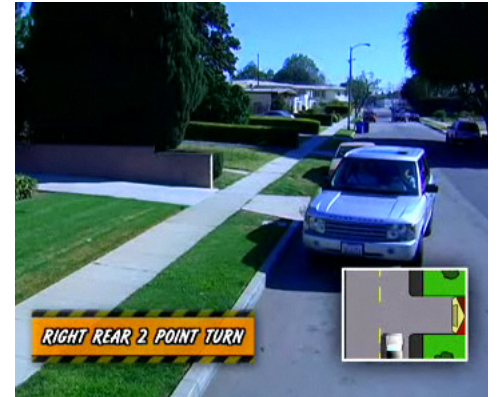

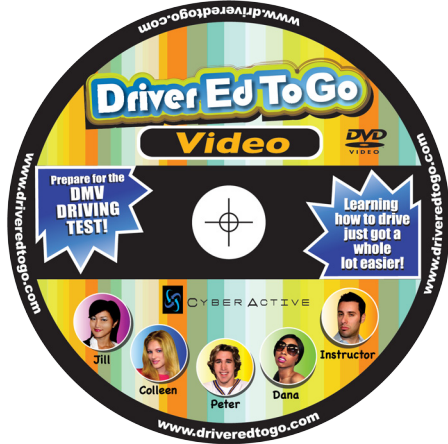

Effectiveness of Online Courses

The demand for online education is evidenced by the recent increase in the online-education student population. According to the CBS News report “Earning a Degree Online,” the online student population is growing by 30 percent each year!

Driving-Simulation Videos

DriverEdToGo has also produced a driving-instruction DVD for teenagers called "DriverEdToGo." Sold through various websites including Amazon, the DriverEdToGo DVD has become one of the most popular driving-simulation videos in the country! Many sections of the DVD are also included in our online driver education course to help explain important driving tasks such as pre-driving vehicle checks, backing up, space management, parking, driving on the expressway, and more!

Administrative and Academic Support

Our customer service and academic support representatives are available seven days a week to assist students and administrators with any issues they might experience during the course.

Incorporating DriverEdToGo into Your School Program

DriverEdToGo is a 100 percent turnkey, online driver education solution that can be implemented into your school's curriculum at no cost to the school. We can implement DriverEdToGo into your high school in the following ways:

- 1.** We can create a branded registration portal, which may be linked to your school's website. We give the school access to the portal containing all student information. Designated school personnel have access to a secure administrative dashboard, which enables them to view a student's registration details, progress, and activities. This feature provides the administrator with full access to a student's footprint. Each footprint displays detailed information about the student, such as how long he or she spent reading each chapter, watching each video, and viewing each simulation. Detailed results of a student's performance on each quiz and final examination are also provided.
- 2.** If your school's driving education program does not have a website, your school can direct students to our website, where students can register for the driver education course.
- 3.** DriverEdToGo can work with the school to implement a website that links to its student portal.

DriverEdToGo will pay part of the students' fees to the school for its administration and implementation of this program into its curriculum.

Getting Started Is Simple

If you have any questions or would like to become a DriverEdToGo partner and incorporate our unique e-learning platform into your driving school's or school district's curriculum, [please contact our Driver Education School Programs Director today at 1-310-460-7189](#). We will be happy to set up an online testing account or answer any questions you may have about the program.

Our students are **engaged**
to learn.
